AI/ML Integration Engineer

Laer AI
ID: SRN2025-10528

AI/ML Integration Engineer
Laer AI • Full Time • New York, NY • Hybrid • $180K - $210K base salary

About the Company:
Laer AI is driven by a singular vision of radically transforming the experience of search and helping organizations find meaning and patterns hidden behind volumes of disparate and unstructured data. Its current product provides a significantly more accurate, faster, and cost-effective solution to the expensive document review process during litigation, investigations, and compliance.

Roles and Responsibilities:
- Develop and implement backend solutions integrating AI capabilities.
- Collaborate with the R&D team to iterate on new AI features.
- Ensure seamless deployment of AI-powered functionalities.
- Optimize API design for microservices and distributed systems.

Job Requirements:
- 5-10 years of experience (strong Master's program graduates or professionals with relevant experience).
- Strong understanding of backend development, distributed system architecture, and API design.
- Experience with AI model integration.
- Proficiency in Python, C#, Java, PostgreSQL, and containerization tools (Docker, Kubernetes).
- Ability to work hybrid in NYC.

❌ **Do NOT Apply If You:**
- Require visa sponsorship (H1B, TN, etc.).
- Have a history of frequent short tenures (job hopping).
- Come from only big company experience (e.g., Uber, Intel, etc.) without startup experience.
- Have a background in IT consulting (Infosys, Tata, Capgemini, Cognizant, Wipro, or adjacent companies).
- Graduated from coding bootcamps (Full Stack Academy, Hack Reactor, etc.).
- Have fake or misrepresented profiles.
